

I am writting concerning ET 01-278 which is a proceeding that deals in part with a potential band threat to the popular 70-cm band from a Part 15 RF identification device proposed for deployment by SAVI Technology. I agree with the ARRL who has argued that the FCC lacks authority under the Communications Act of 1934 to permit unlicensed devices with substantial interference potential and that such devices must be licensed. I would also like to say that I would be against any decision or ruling that would limit or infringe upon the amateur use of the 70cm Band. We presently have interference from many devices such as TV antennas from Wineguard and others. We would like very much to prevent any of the same from these devices in 01-278. Please register my objections and make every effort to stop any other devices or groups from using the Amateur allocation in the 70cm band. Thank You- Jeff Taylor
